Engineering Properties of Agricultural Materials
Introduction
Engineering properties are the properties which are useful and necessary in the design and operation of equipment employed in the field of agricultural processing. They are also useful for design and development of other farm machinery. An essential factor in the operation of such as cleaning, grading, elevating, conveying, sorting, cutting, and conditioning, the mechanical properties of food are among the important operations in agricultural processing. In these operations while handling of grain and other commodities the properties which play an important role are physical, mechanical, chemical, electrical, and hydrodynamic, chemical and optical properties of the materials. Basic information on these properties are of great importance and help for the engineer, food scientist and processor towards efficient practice and equipment development. An attempt has been made to describe some of the engineering properties recommended in post-production handling of agricultural crops.
Physical properties
The physical properties such as size, shape, surface area, volume, density, porosity, color and appearance are important in designing particular equipment or determining the behavior of the product to be handled.
Various types of drying analysis and moisture represent are designed on the basis of physical properties of such such as size, shape, specific gravity, surface roughness, color etc. For designing an air screen grain cleaners, the shape and size of the grain determine the shape and size of screen opening, angle of inclination and rotation angle and frequency of rotation. The density of the grain decides the rate of screening surface. The bonded area and related dimensions and density are essential for determination of terminal velocity of the grain. Terminal velocity is necessary to decide about the screening velocity of air blast for separation of lighter materials in an screen grain.
The shape parameter is an important parameter which affects conveying characteristics of solid materials by air or water. The shape is also considered in calculation of various conveying and handling loss of food materials.
The bonded area and related dimensions are essential for determination of terminal velocity, Bond's number and drag coefficient. The density and specific gravity are useful for calculating the terminal velocity to learn handling operations in determining Bond's number, permeability and terminal handling of the agricultural materials.

Hello friends, are you looking for a free download link from a textbook of Engineering Mathematics N P Bali and Manish Goyal PDF and then you get the right place? In order to help you gain knowledge, Testbook brings several chapters of logical reasoning to help you prepare your government's work. Therefore, "Nagaland" is the correct answer. 1) P4 à '16 + 4 = 20) S2 à '19 + 2 = 21 3) O5 à '15 + 5 = 20 4) I11 à '09 + 11 = 20. (Figure and bottom) Then add these parts separately, we get, number of triangles (superior) = 1 + 2 + 3 + 4 = 10. The logic here is not an amount of positional value + 1, but the logic here is a sum of opposite position of letters. à 'Kohima is the capital of Nagaland. So, 6 - 5 = 1 is the code for Monday. À Important Points in the questions of classification, three options will share a common positive characteristic whereas the fourth option will not. Hence there are "24" triangles in the figure. Dispur : Assam à Assam Dispur is the capital of Assam. GO = 7 + 15 = 22 À ANURAVÀÀ = 11 Similarly, CF = 3 + 6 = 9 À ANURAVÀÀ 9/2 = 4.5 À ANURAVÀÀ 14.5 KMÀ À = 11 + 13 = 24 cÀÀÀ 24/2 = 12 cÀÀ À 14.5 IT = 9 + 20 = 29 cÀÀÀ 29/2 = 14.5 LP = 12 + 16 = 28 cÀÀÀ 28/2 = 14 cÀÀ À 14.5 Hence, 'IT' is the correct alternative. The letters are replaced by the place value of their reverse letter and then the numbers are added together to obtain the code. I hope this book will help you to get the code. Hence, cÀÀÀpinkcÀÀÀ is the odd one out. Number of triangles = 4 Thus, total number of triangles = 20 + 4 = 24. So, here the number of odd days are 2. Leap year = 366 days or 52 weeks and 2 days. Eloquent means fluent or persuasive in speaking or writing, whereas Inarticulate means unable to express one's ideas or feelings clearly or easily, opposite of Inarticulate.
